

ERP Software That Fits Any Manufacturing Mode

Real-time data is paired with the flexibility you need to make your processes more efficient. The software has all the elements you need to fit to your manufacturing mode(s).

- **Engineer-to-Order**

Manage the details of your projects via real-time data tracking of prototyping, engineering, shop floor costs & more.

- **Government Contract**

Fulfill compliance & reporting regulations for government agencies including all CSC categories.

- **Make-to-Order**

User-friendly tools to manage fluctuating supply chain needs & control shop floor schedules & costs.

- **Make-to-Stock**

Accurate forecasting, increased inventory turnaround & improved capacity planning increase profits.

- **Mixed-Mode**

The flexibility you need for mixed mode manufacturing, combined with the efficiency & accuracy of single-entry data.

- **Project Based**

Manage all the aspects of large projects on a single screen to make better decisions & report accurate status.

- **Repair Based**

The flexibility you need to manage dynamic labor & inventory requirements to fix it right the first time.

BENEFITS FOR YOUR MODE

- Move parts through the shop faster
- Schedule and deliver on time
- Get your quality right
- Grow your sales
- Know your costs
- Have accurate inventory
- Control your labor costs
- Serve your customers better
- Improve efficiency & eliminate spreadsheets
- Be connected & integrate tech & machines
